XXIV SYMPOSIUM

VIBRATIONS IN PHYSICAL SYSTEMS

Będlewo (near Poznań), May 11-15, 2010

Present edition of Symposium Vibrations in Physical Systems is under auspices of

**President of Poznan University of Technology
Adam HAMROL**

**Dean of Mechanical Engineering and Management Faculty
Jan ŻUREK**

SCIENTIFIC COMMITTEE

Czesław CEMPEL – president, Andrzej TYLIKOWSKI – vice president,
Vladimir I. ALSHITC, Jan AWREJCEWICZ, Roman BOGACZ, Tadeusz BURCZYŃSKI,

Introduction to the Volume XXIV of Collected Papers on Vibrations in Physical Systems

Vibrations, oscillations and waves as physical phenomena are omnipresent. They are the sign of life, the sign of the operation of machines and devices and they accompany any production processes. Their effects may be harmful, useful and they may also be a source of information on the technical condition of the supervised machines and devices. Volume XXIV of Vibrations in Physical Systems published every second year deals with these widespread phenomena. It comprises the papers presented by specialists from our country but also from abroad at many sessions of the XXIV Symposium of Vibrations in Physical Systems organized also every second year. The Symposium has been organized since 1960 in Poznan by a branch of the Polish Society of Theoretical and Applied Mechanics and the Institute of Applied Mechanics at Poznan University of Technology.

Topics of the publications relate to a wide range of issues connected with modelling and identification of mechanical systems, their stability and dynamics of mechanical systems as well as physical phenomena such as propagation of acoustic waves, vibrations in solid bodies, vibrations of liquids and mechanical structures.

The monograph comprises also numerous presented publications relating to the issues of dynamics in biological as well as biological and mechanical systems. They mainly concern mechanical properties of a human body and its organs (auditory bones) or parts. Other publications describe the dynamic interaction of power between human and machine (Human – Hand-held Powered Tool) or distribution of power and the energy flow in Human-Machine Systems.

Many of the publications present the results of research carried out through simulation with the application of modern digital technologies worked out for the needs of solving linear and non-linear issues of the dynamics of solid bodies or physical phenomena such as propagation of acoustic waves or complicated structures. The publications comprise the results that are analysed from the point of view of the applied methodology or accuracy of the obtained figures.

There are also quite a few publications devoted to methods of passive, active and semi-active minimizing of vibrations and noise and to modelling of vibrations damping with viscotic damper. The publications concerning dynamic issues also analysed the stability of the tested mechanical systems.

Other significant publications concern the monitoring of technical facilities with the use of the propagation of elastic waves that allow us to detect cracks in the composite structure under the test and to specify their location. They also describe methods of modelling the propagation of waves.

All the papers comprised in this volume have been reviewed by members of the Scientific Committee, and in some cases by specialists outside the Committee, should the issues concern problems outside the scope of knowledge of the Committee members. I would like to thank all those persons who help us review the papers and the published monograph and improve their quality.

Co-editor
Marian W. DOBRY

CONTENTS

INVITED PAPERS

1. **Wiesław OSTACHOWICZ, Paweł KUDELA**..... 15
STRUCTURAL HEALTH MONITORING BY MEANS
OF ELASTIC WAVE PROPAGATION
2. **Bogdan MARUSZEWSKI** 23
PROFESSOR JAROSŁAW STEFANIAK 1929 – 2008
3. **Marek IWANIEC, Dorota MARSZALIK**..... 29
